Professional Summary

Backend-focused Java Developer with 3+ years of experience building scalable, secure, and high-performance enterprise applications using Java and Spring Boot. Strong expertise in RESTful API development, microservices architecture, Spring Security, JWT authentication, database design, and performance optimization. Experienced in implementing role-based access control, pagination, filtering, exception handling, and structured logging. Proficient in containerization and cloud-ready deployments using Docker and Kubernetes. Passionate about designing clean, maintainable backend systems aligned with business goals.

Technical Skills

Programming: Java (Core Java, OOP, Collections, Streams, Multithreading, Exception Handling)

Backend Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring AOP, RESTful Web Services

Security: Spring Security, JWT Authentication, Role-Based Access Control (RBAC), API Security

Microservices & Architecture: Microservices Architecture, API Gateway, Service Registry, Distributed Systems, Kafka

Databases: MySQL, SQL, Query Optimization, Indexing, Transactions

DevOps & Cloud: Docker, Kubernetes, CI/CD, Git, Maven, Azure Cloud, Azure Service Bus, Azure File Storage, Azure Monitoring, Azure API Management

Testing: Junit, Mockito, API Testing

Tools: Postman, Swagger/OpenAPI, Eclipse, STS, IntelliJ IDEA, GitHub, JIRA, Confluence

Professional Experience

Software Engineer

Sep 2022 – Present

Capgemini Technologies Pvt Ltd

Bangalore, India

Project Details: Manulife Financial Corporation is a Canadian Insurance Company. We handled Japan division application. Manulife will be selling policies through internal agents, third party agents and banks

- Designed and developed RESTful microservices using Spring Boot for policy illustration and plan creation systems (Manulink system handles EPOS And NBOS).
- Implemented secure authentication and authorization mechanisms using Spring Security and JWT to protect insurance transaction APIs.
- Developed synchronous inter-service communication using REST APIs within a microservices architecture.
- Implemented asynchronous event-driven communication using Azure Service Bus to enable decoupled processing of insurance workflows such as policy creation, notifications, and downstream integrations.
- Migrated enterprise applications from Pivotal Cloud Foundry (PCF) to Azure Kubernetes Service (AKS), enabling containerized deployments and improving scalability and reliability.
- Containerized backend services using Docker and deployed them to AKS clusters using CI/CD pipelines with Jenkins and Maven.
- Designed and optimized relational database schemas; improved performance through indexing and SQL query tuning.
- Implemented pagination, filtering, and validation mechanisms for high-volume insurance policy APIs.
- Integrated structured logging and centralized exception handling to improve observability and production troubleshooting.
- Provided production support, performed root cause analysis, and resolved performance bottlenecks in live insurance systems used by internal agents, third-party agents, and banking partners.
- Collaborated in Agile (Scrum) environment, participating in sprint planning, backlog grooming, and release cycles.

Education

Bachelor of Technology (B.Tech)

Mechanical Engineering

Vishnu Institute of Technology, Bhimavaram

CGPA: 8.15 | 2018 – 2022

Certifications

Microsoft Certified: Azure Fundamentals

Certification Number: F3468U-318BF5

Google Cloud Certified: Cloud Digital Leader

Certification Number: 34hY2Y

Languages English | Telugu (Native) | Hindi
